

CONSISTENT USER EXPERIENCE

Horizon Private Cloud is the only company offering vDesktop™ solutions. Much more than an RDS connection, vDesktop™ leverages Citrix's ICA and HDX technology to insure a fluid experience. Our proprietary combination of Citrix and Microsoft VDI applications and Horizon Private Cloud custom software allow us to deliver a unique hosted model to any endpoint device

LOW MONTHLY SUBSCRIPTION

We are flexible. Whether you need 1 development seat or 1,000 vDesktop instances, Horizon Private Cloud offers month to month and yearly subscription models. By leveraging our unique service, you eliminate large cash investments in software licensing and hardware infrastructure. Microsoft Office Standard is included with every vDesktop instance along with 10 GB of user SAN storage. Larger storage options are available.

Hosted Virtual Desktops – Windows in the Cloud.

Changing Business – One Desktop at a Time

Hosted virtual desktops are changing how employees use and manage data across their enterprise. Available over a secure internet connection or via a dedicated circuit, Windows hosted virtual desktops run in Horizon's Private Cloud data center and are secured by our always-on high availability infrastructure. User data and preferences are protected against loss or theft. Whether from home, on the road, on a PC or iPad, your employees gain ridiculously flexible computing power without the massive deployment and support costs.

Predictable Cost Model

Hosted virtual desktops offer a predictable monthly cost with no upfront hardware or software investment. Your organization gains the benefits of Horizon Private Cloud's collective customer base by sharing our high availability, 99.999% up-time data centers.

vDesktop is a monthly subscription to a Windows desktop in the cloud. All aspects of provisioning and support are reduced to a single pane of glass via administration dashboard. Directly connected to Windows Active Directory, vDesktop administrators assign permissions and allocate new desktop instances centrally.

Upgrades and software patches are applied to a vDesktop Template. When employees log into vDesktop, the updated template is used. This dramatically reduces support costs and user frustration.

Any Device – Any Where

Horizon Private Cloud is the only company offering vDesktop™ solutions. Our hosted virtual desktop services are delivered to any device via a secure internet connect. Devices include:

- Any Windows desktops and laptop PC
- Any MAC or Apple PC
- iPad and iPhone devices
- Android tablets and smartphones
- Blackberry Mobile Devices
- Thin Client End Point Devices

No Risk Proof of Concept

Try our vDesktop™ hosted virtual desktop solutions. Discover how easy it is to let go of the PC as you know it and embrace desktop virtualization. We believe in our solutions. We'll even provide a Proof of Concept phase prior to implementation of your solution. If you are not satisfied with how vDesktop™ performs or we do not meet your expectations, feel free to cancel your project and we will reimburse the cost of the POC. That's our commitment to you and our dedication to our service.

Contact Horizon Private Cloud today for an open and informative discussion about your business needs.
